

Novozymes OdorCap[®] 5115

Protects your community standing by controlling wastewater and sludge odors

As communities expand and businesses and homes are being located closer to wastewater treatment facilities, odor control has become increasingly important. Wastewater treatment naturally has odors associated with it, and plant operators must be diligent in order to maintain odor control and minimize public complaints. Most wastewater odors, like many of the issues around wastewater treatment plants, are biological problems that are often best solved with biological solutions.

OdorCap 5115: Broad-based biological formulation for controlling a wide range of wastewater odors

OdorCap 5115 is a biological odor control solution for general wastewater applications and sludges. It contains a high concentration of odor-degrading microorganisms for long-term odor prevention plus fragrance for immediate relief. Used regularly, OdorCap 5115 provides consistent and long-term odor control.

The benefits of using OdorCap 5115

Lower operating costs

- Reduces spending on odor control

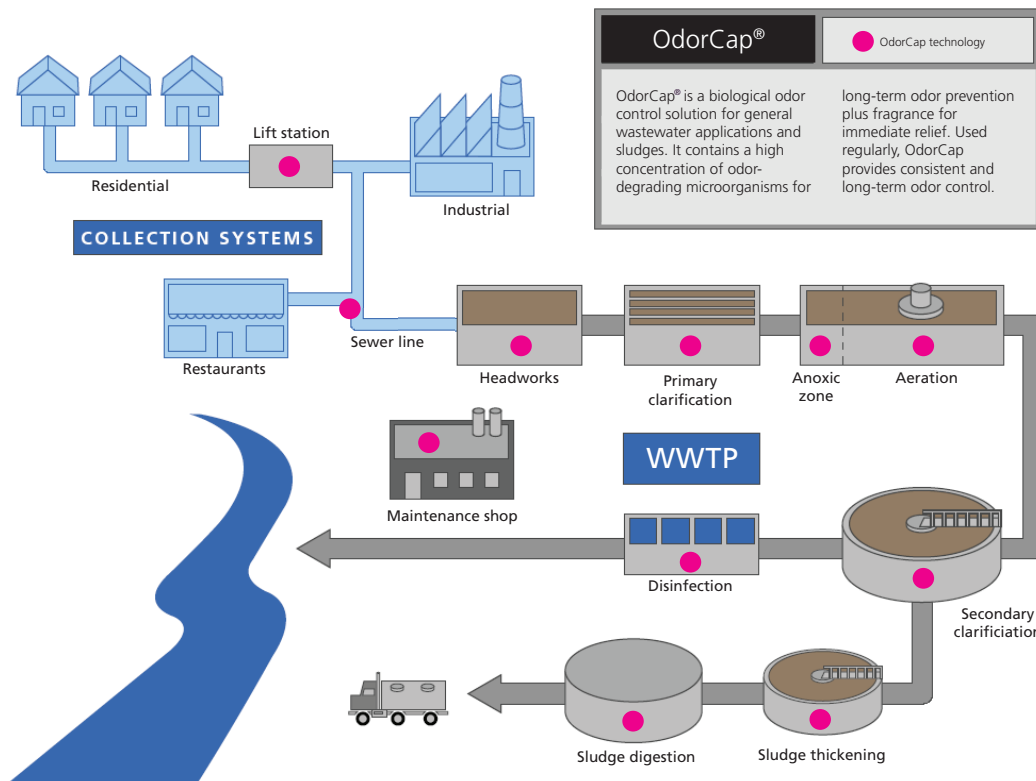

Improved plant efficiency

- Improves odor around sludge-handling operations
- Provides long-term odor control for various wastewater applications

Simplified operations

- Reduces odor complaints
- Works within the existing plant infrastructure

Novozymes is the world leader in bioinnovation. Together with customers across a broad array of industries we create tomorrow's industrial biosolutions, improving our customers' business and the use of our planet's resources.

Enhancing your business is our business

Team up with Novozymes for innovative biosolutions to reduce costs, improve water quality, and capitalize on renewable energy opportunities. Unique products, experience with beneficial microorganisms and enzymes, and our commitment to improve our business are just three reasons to choose Novozymes as your bioinnovation partner.
