FIFRA 2ee RECOMMENDATION

Use information in accordance with Section 2(ee) of FIFRA

The following recommendations are for use and distribution in all states where crop and pest are present and where 2(ee) recommendations are recognized.

**Met52® EC**

EPA Registration Number 70120-10

For the SUPPRESSION of:

- Aphids on onions, celery, lettuce, spinach, tomatoes, peppers, grape, strawberry, raspberry, cranberry and blackberry

**Directions for use:**

**Important:**

Before using Met52 EC, read and follow all applicable directions, restrictions, precautions and first aid statements on the EPA-registered label.

**Foliar application, high volume:**

Apply at a rate of 8–32 fl. oz. (½ pint to 1 quart) per 100 gallons in high volume sprays (0.5 to 2.5 teaspoons per gallon). Mix well by external mixing, in-tank mixing, or pump circulation to form emulsion. Do not apply at pressures above 200 PSI. Spray to wet all foliage, but avoid runoff.

**Foliar application, low volume:**

Apply 8–64 fl. oz. (½ pint to 2 quarts) of Met52 EC to one (1) acre. Follow spray equipment manufacturer’s instructions for final spray volume to obtain adequate coverage. Do not apply at pressures above 200 PSI. Do not apply through a thermal pulse fogger.

It is a violation of federal law to use this or any other pesticide product in a manner inconsistent with its labeling. This bulletin contains supplemental instructions for use of the above referenced product. Follow these instructions carefully. This bulletin should be in the possession of the user at the time of application. Read the Section 3 Federal Label, in its entirety, before buying or using this product.

**Follow all applicable directions, restrictions and precautions on the EPA-registered label.**

**Please contact Novozymes at 1-306-657-8200 for any product inquiries or to determine if this product is registered in your state.**
